CV – TUAN HAJI ROSLAN RAMLY

Tuan Haji Roslan Ramly, aged 53, was born in Kuala Kangsar, Perak, Malaysia. He first hold his Diploma in Architectural, Planning and Surveying from Mara Institute of Technology in the year 1982, followed by Diploma in Town & Regional Planning from Universiti Teknologi Malaysia in the year 1989 and Bachelor Degree in Housing, Building and Planning from Universiti Sains Malaysia in the year 1996. He later pursued his study again in Universiti Sains Malaysia and finally was granted with Master in Town Planning in the year 1997.

He initiated his career as a Technician in the Penang Island Municipal Council (Majlis Perbandaran Pulau Pinang) which is now known as Penang Island City Council (Majlis Bandaraya Pulau Pinang) in the year 1983, followed by his promotion as Assistant Town Planner in the year 1990. He was later appointed as a Town Planner in the year 2001 and now he had successfully landed his tenure as Deputy Director of Development Planning Department with the total length of 32 year in services in Penang Island City Council.

With his diverse background, functional and experience over a period that spans more than three decades, Tuan Haji Roslan had continues to helm the department with full accountability across the areas of operational excellence and full planning of Penang Island especially in planning permission and development control of the island through preparation of policies and guidelines.

He had collaborated with the other government sectors and had directly responsible in preparation of Penang Island

Structure Plan & Local Plans and the latest, Penang Island Transport Master Plan.

He is a registered professional planner with Malaysian Institute of Planners (MIP) – the board of Town Planners Malaysia.

Professor, DR, Masazumi AO

Yokohama City University (YCU)

【Position】

- Director, Global Cooperation Institute for Sustainable Cities
- Professor, Division of Global Urban and Regional Studies
Association of International Arts and Science
- E-mail: blue@yokohama-cu.ac.jp

【Personal Data】

Education: Graduate School of Environmental Studies, Nagoya University

- ✓ Doctoral Degree in Environmental Studies, Nagoya University

➤ **Major Area of Experience:**

2010 – Professor, Yokohama City University

2007 –2010. Professor, Nagoya University: Research Strategy & Promotion Office.

Graduate school of environmental studies, Environmental Systems and Planning

1998–2007. Senior Research Fellow, Kyoritsu Institute ※the rest omitted

- **Nationality:** Japanese

【Research Activities】

I research tackles the border less issues regarding air, sea water, and urban wastes (3R: sound material cycle policy). As for the research fields, I specialize in the advancement of preventive environmental policy aimed at checking the causal agents for the environmental pollution, and in the possibilities of resource circulation and regional (multinational) environmental collaboration. The target regions of my study are: the Baltic Sea Region (Denmark, Finland, Sweden, Germany, Estonia, Latvia, Lithuania, Russia, and Poland, among others) and the East Asia (China, Vietnam, Philippine, Thailand, Indonesia, Malaysia and Japan), United States America.

- **Research title 1: Model for environmental cooperation in Asia;** I suggest Bottom up approach and Top down approach as the ways of environmental protection. Problems the city can solve should be done in the city itself. *Bottom up approach is the model for citizens;* analyzing environmental load and socio-economic factors, development and implementation of method for environmental cooperation at the grass roots level, and promotion of environmental education. *Top down approach is for city and companies.* Problems that cannot be solved by the city should be resolved in a national unit. Through making an environmental action plan which is a focus on facilitating international cooperation and index of assessment on capability. Cities and companies share responsibility on environment conservation, make environmental policy and its action plan, and also thrive on technology transition and supporting human innovation.
- **Research title 2: Proposal for regional system of 5R society;** 5R are “Reduce, Reuse, Recycle, Refine, Rebuy”. 3R Reduce reuse recycle has now become common in Asian developing countries. 5R consists of the five processes of waste management. Refine and rebuy which is more common in the private sector is the explanation of 5R in the standpoint of the private sector. Reduce is to aim for the zero emission or reduction of energy usage. Reuse includes consideration of LCA and interchangeability. Recycle contains the design for easy to scrap products and process of recycling. Refine means reducing the use of composite materials and select to use recycled resources. Rebuy is to use the reused and recycled products. Municipalities and citizens are mainly responsible for the former three. The latter two are more related to the private sector side. When we try to promote 5R, we face difficulties: the high cost of the system. It mainly comes from the vicious cycle of low needs, and high cost. To cut this cycle, we need to work on promoting the technological capacity of 5R at each company; creation of smart government, company and consumers; and change the sense of value of us: Ecology is more important than economy when considering waste management. We thinking about “Cradle to Cradle Model “in Asia Society.
