Frequent fires in collection trucks !!

Due to mobile batteries and small electronic devices with built-in batteries

In recent years, fires in collection trucks have frequently occurred in the city. The cause is batteries (lithium-ion batteries). Lithium-ion batteries can catch fire if subjected to pressure or strong impact. They may ignite when crushed inside collection trucks, leading to fires.

If a fire breaks out in collection vehicles or processing facilities, it can cause significant losses, and if it

occurs at a facility, collection may be halted until recovery is complete. The City of Yokohama asks citizens to "remove batteries from items where possible and recycle them, and for items with non-removable batteries, separate them from other trash and dispose of them on 'burnable garbage days.'"

Details on proper disposal here

Collection Office

For inquiries, please contact the office of your district.
